

## CLAIMS

1. A polyester resin composition  
which comprises a polyalkylene terephthalate resin  
5 having an acid value of not higher than 30  $\mu\text{eq/g}$  and a layered compound.
2. The polyester resin composition according to Claim 1  
wherein the polyalkylene terephthalate resin having an  
10 acid value of not higher than 30  $\mu\text{eq/g}$  comprises at least one polyalkylene terephthalate resin selected from the group consisting of polyethylene terephthalate resins, polypropylene terephthalate resins and polybutylene terephthalate resins.
- 15 3. The polyester resin composition according to Claim 1  
or 2  
wherein the layered compound has been treated with a polyether compound.
- 20 4. The polyester resin composition according to any one of Claims 1 to 3  
wherein the layered compound has been treated with a silane compound.
- 25 5. A polyester resin-based molded article  
which is partly or wholly made of the polyester resin composition according to any one of Claims 1 to 4
- 30 6. The polyester resin-based molded article according to Claim 5  
which satisfies the following requirements (a) and (b):  
(a) That the diffuse reflectance of the surface provided with an aluminum layer without primer coating should be not higher  
35 than 2.0%;

(b) That the deflection temperature under a load of 0.45 MPa should be not lower than 150°C.

7. The polyester resin-based molded article according to  
5 Claim 5 or 6

which further satisfies the following requirement (c) :

(c) That the diffuse reflectance of the surface provided with an aluminum layer without primer coating as measured after 10 hours of treatment at 150°C should be not higher than 3.0%.
